JOB MARKET PAPER

Supply Network Fragility, Inventory Investment, and Corporate Liquidity [Link to Most Recent Version]

SSRN Link

Abstract: This study uses a novel dataset of over 11,000 foreign suppliers to U.S. manufacturers to investigate the impact of supply network fragility on corporate policies. The scarcity of suppliers offering specialized inputs emerges as a key driver of fragility. Both theoretical and empirical evidence indicate that firms with fragile supply networks maintain less cash, higher leverage, and more input inventories. Moreover, plausibly exogenous variation in fragility stemming from technology adoption and disruptions supports a causal interpretation of the results. My findings suggest that firms with fragile supply networks find liquidity less beneficial because specialized inputs lack a spot market post-disruptions.
